Professional Summary

Full-stack developer specializing in backend systems — Node.js, Express, PostgreSQL, MongoDB, Prisma ORM, and REST APIs. Experienced in JWT-based RBAC, real-time architectures, and AI-powered pipelines. Exposure to agile workflows and cloud infrastructure (AWS EC2, Docker). 240+ LeetCode problems solved.

Technical Skills

- **Languages:** JavaScript (ES6+), TypeScript, Python, Java, SQL
- **Frontend:** React (Hooks), Next.js, Tailwind CSS, Framer Motion, GSAP
- **Backend:** Node.js, Express.js, Socket.IO, Selenium, REST APIs
- **Databases & Auth:** PostgreSQL, MongoDB, Prisma ORM, Firebase, JWT, RBAC, OAuth
- **AI & Tools:** Groq AI, Prompt Engineering, Git, Docker, Vite, Vercel, Netlify, AWS EC2
- **Core CS:** Data Structures & Algorithms, OOP, DBMS, Operating Systems, System Design

Experience

- Frontend Developer & Co-Founder** – QuickPrint (Campus Startup) 2025
- Built the complete React (Vite) + Tailwind frontend for a campus print-on-demand platform, integrating document upload workflows, dynamic form handling, and REST APIs via Axios
 - Led frontend architecture on a production-grade async worker system deployed on AWS EC2 with Docker; acquired 20+ customers on launch day

Projects

- StreamSync – Real-Time Co-Watching Platform** [Live](#) | [GitHub](#)
- Implemented real-time YouTube playback synchronization using Socket.IO with host-controlled room sessions, live chat, and late-joiner timestamp catch-up logic
 - Designed room lifecycle management — creation, join, disconnect cleanup, and host reassignment — on a Node.js/Express event-driven backend
- InternTrack – Role-Based Internship Management System** [Live](#) | [GitHub](#)
- Architected a JWT-based RBAC system with distinct student and faculty permission layers — students submit records while faculty review and approve via dedicated dashboards
 - Automated Excel report generation using ExcelJS, replacing a fully manual college internship tracking process; modeled relational data in MongoDB across users, submissions, and review states
- AutoTube – AI-Powered Learning Assistant** [Live](#) | [GitHub](#)
- Integrated the Groq AI inference API to generate structured summaries and Q&A pairs from YouTube transcripts via an engineered prompt pipeline that returns consistent, parseable JSON
 - Developed a Node.js/Express backend handling transcript extraction, Groq API calls, and response parsing; used Firebase Auth for user management and MongoDB for persistent history storage
- ElevateAI – AI Interview Coaching Platform** (*In Progress*) [GitHub](#)
- Built full-stack architecture using Next + Tailwind, Express + Prisma + PostgreSQL, and Vercel deployment with automatic GitHub-triggered builds
 - Engineered AI infrastructure layer: prompt versioning system, LLM response parser/validator, memory and context injection, and Redis-based per-user rate limiting

Education

- Chaitanya Bharathi Institute of Technology, Hyderabad** 2023–Present
- B.E. in Information Technology | **CGPA: 8.24/10** | Coursework: DSA, DBMS, OS, Web Technologies

Certifications & Achievements

- MongoDB Node.js Developer Path – MongoDB University | Gen AI + Frontend Web Development – CodeSprint
- 240+ LeetCode problems solved
