Professional Summary

Software developer with hands-on experience designing and deploying scalable, microservice-style backend systems and cloud-based applications. Proficient in Java, Python, and JavaScript, with production experience across REST APIs, relational (SQL) and non-relational (NoSQL) databases, and cloud deployment (AWS, Docker). Strong foundation in Data Structures & Algorithms (300+ LeetCode problems solved) and core CS fundamentals (OS, Computer Networks, DBMS), with a track record of shipping and deploying complete products end-to-end.

Technical Skills

- **Languages:** JavaScript (ES6+), TypeScript, Python, Java, SQL
- **Backend:** Node.js, Express.js, FastAPI, Socket.IO, REST APIs, Microservice-style Architecture
- **Databases & Caching:** SQL (PostgreSQL, MySQL) & NoSQL (MongoDB), Redis, Prisma ORM, Firebase, JWT, OAuth
- **Cloud & DevOps:** AWS (EC2, S3), Docker, Git
- **AI & Tools:** Groq AI, Gemini API, Prompt Engineering, Vercel, Netlify
- **Core CS:** Data Structures & Algorithms, Object-Oriented Programming (OOP), Operating Systems, Computer Networks, DBMS, System Design

Experience

Software Developer & Co-Founder – QuickPrint (Campus Startup) 2025

- Built the complete React (Vite) + Tailwind frontend for a campus print-on-demand platform, integrating document upload workflows, dynamic form handling, and REST APIs via Axios
- Contributed Redis integration within the backend stack and collaborated on production deployment to AWS EC2 with Docker, using AWS S3 for file storage; contributed to a launch that acquired 20+ customers on day one

Projects

ElevateAI – AI Interview Coaching Platform Live | GitHub

Next.js, Node.js, Express, FastAPI, PostgreSQL, Prisma, Groq AI, Gemini API

- Architected a scalable, microservice-style multi-agent AI pipeline (FastAPI + Python) with specialized agents for resume parsing, ATS scoring, interview question generation, and answer evaluation
- Designed dedicated orchestrators and structured prompt templates per agent, keeping each AI feature independently maintainable, testable, and deployable
- Engineered a dual-LLM fallback system (Groq primary, Gemini secondary) with auto-retry and JSON self-correction to keep the platform resilient against single-provider failures
- Deployed full-stack architecture on Vercel with automatic GitHub-triggered builds, using Express + Prisma + PostgreSQL on the backend

StreamSync – Real-Time Co-Watching Platform Live | GitHub

React, Socket.IO, Node.js, Express.js, MongoDB

- Built a real-time co-watching platform using Socket.IO to synchronize YouTube playback (play, pause, seek) across multiple connected clients with low latency
- Designed host-controlled private room sessions with unique room IDs, isolating each watch session
- Implemented live chat alongside synchronized playback, plus an in-app video search mode for quickly finding and loading content
- Built a responsive React + Tailwind + Framer Motion frontend backed by a Node.js/Express + Socket.IO server, deployed across Vercel (frontend) and Render (backend)

InternTrack – Role-Based Internship Management System Live | GitHub

React, Node.js, Express.js, MongoDB, JWT, ExcelJS

- Architected a JWT-authenticated REST API with role-based access control, separating student and faculty permission layers
- Built dedicated dashboards where students submit internship records and faculty review, approve, or reject submissions
- Built a tool to automate Excel report generation (ExcelJS), replacing a fully manual college tracking process
- Modeled relational-style data in MongoDB across users, submissions, and review states for consistent reporting

Education

Chaitanya Bharathi Institute of Technology, Hyderabad, India Sept 2023 – May 2027
Bachelor of Engineering in Information Technology

Certifications & Achievements

- MongoDB Node.js Developer Path – MongoDB University
- Participated in Smart India Hackathon and Hacktoberfest, contributing a team project submission
- 300+ LeetCode problems solved; cleared HackWithInfy Round 2
