Professional Summary

Full-stack developer specializing in backend systems — Node.js, Express, FastAPI, PostgreSQL, MongoDB, Prisma ORM, and REST APIs. Experienced in JWT-based RBAC, real-time architectures, and multi-agent AI pipelines. Exposure to agile workflows. 250+ LeetCode problems solved.

Technical Skills

- **Languages:** JavaScript (ES6+), TypeScript, Python, Java, SQL
- **Frontend:** React.js, Next.js, Tailwind CSS, Framer Motion, GSAP
- **Backend:** Node.js, Express.js, FastAPI, Socket.IO, REST APIs
- **Databases & Auth:** PostgreSQL, MongoDB, Prisma ORM, Firebase, JWT, OAuth
- **AI & Tools:** Groq AI, Gemini API, Prompt Engineering, Git, Vercel, Netlify
- **Core CS:** Data Structures & Algorithms, OOP, DBMS, Operating Systems, System Design

Experience

- Frontend Developer & Co-Founder** – QuickPrint (Campus Startup) 2025
- Built the complete React (Vite) + Tailwind frontend for a campus print-on-demand platform, integrating document upload workflows, dynamic form handling, and REST APIs via Axios
 - Led frontend architecture for a production-grade campus platform that acquired 20+ customers on launch day

Projects

- ElevateAI – AI Interview Coaching Platform** [Live](#) | [GitHub](#)
- Architected a multi-agent AI pipeline (FastAPI + Python) with specialized agents for resume parsing, ATS scoring, interview question generation, and answer evaluation — each with dedicated orchestrators and structured prompts
 - Engineered dual-LLM fallback system (Groq primary, Gemini secondary) with auto-retry and JSON self-correction; implemented context-aware AI chat by injecting user analytics (scores, roadmap progress) into prompt context
- InternTrack – Role-Based Internship Management System** [Live](#) | [GitHub](#)
- Architected a JWT-authenticated REST API with RBAC — distinct student and faculty permission layers where students submit internship records while faculty review, approve, and manage submissions via dedicated dashboards
 - Automated Excel report generation using ExcelJS, replacing a fully manual college tracking process; modeled internship data in MongoDB across users, submissions, and review states
- StreamSync – Real-Time Co-Watching Platform** [Live](#) | [GitHub](#)
- Implemented real-time YouTube playback synchronization using Socket.IO with host-controlled room sessions, live chat, and video state broadcast to late joiners
 - Designed room lifecycle management — creation, join, disconnect cleanup, and host-controlled user kick — on a Node.js/Express event-driven backend backed by MongoDB
- AutoTube – AI-Powered Learning Assistant** [Live](#) | [GitHub](#)
- Integrated the Groq AI API to generate structured summaries, key points, and Q&A pairs from YouTube transcripts via a configurable prompt with structured response parsing
 - Built a Node.js/Express backend handling transcript processing and Groq API calls; used Firebase Auth for user management and MongoDB for persistent summary history

Education

- Chaitanya Bharathi Institute of Technology**, Hyderabad 2023–Present
- B.E. in Information Technology | **CGPA: 8.24/10** | Coursework: DSA, DBMS, OS, Web Technologies

Certifications & Achievements

- MongoDB Node.js Developer Path – MongoDB University
- Gen AI + Frontend Web Development – CodeSprint
- 250+ LeetCode problems solved
